

Fan intercommunication site system by live relay (athlete series)

For holding simultaneous realtime intercommunication event between adoring athlete and fans at remote site

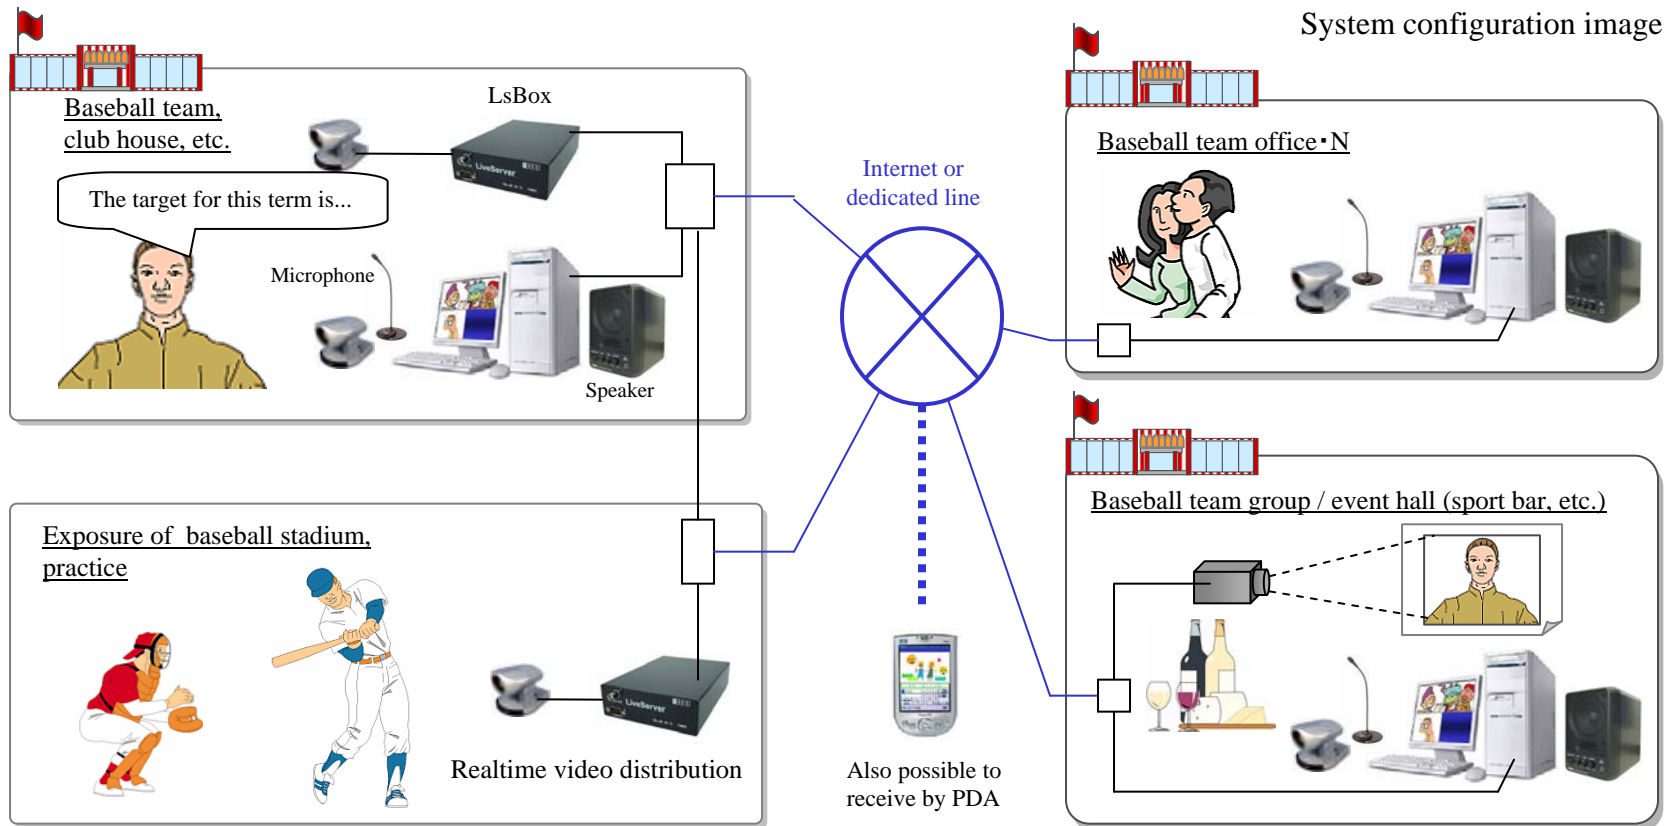

[Remarks]

The application examples published herein, are intended as hints for users for studying potential applications.

Neither guaranteeing the performance nor granting license. Copying or modifying whole or part of the articles shown herein without our prior approval is prohibited by copyright.

- * Possible to distribute realtime video to multiple sites through internet or dedicated line
- * Our own compression method: KAM is remarkably small in data size compared with general video compression technology like MPEG, etc. and less load to line at file transfer. Although it requires dedicated viewer, contributes to enhancement of security
- * Enables bi-directional video/voice communication between 2 sets LsBox.
- * The basic operation of viewer is done through PC. Also possible to launch the captured video to public site.

This is a basic system and possible to customize according to requirements
